2013 HAWK INLET TEST FISHERY UPDATE #4

The department conducted the fourth and final Hawk Inlet shoreline test fishery of 2013 today. All four sets were conducted and estimated total catches of pink and sockeye were above average, and catches of king, coho, and chum were below average. The pink salmon catch was approximately 120% of the ten-year average for test fisheries conducted on or about this date. The chum and sockeye salmon harvests were 38% and 224% of the 10-year average respectively. The average does not include 2011 as the test fishery scheduled for close to this date was not conducted.

The pink salmon sex ratio was 51% male, below the average of 56% male for previous years test fisheries conducted on or about this date.

Update #4

Hawk Inlet test fishery updates will be posted on the ADF&G web site listed below.
